

MTA

AUDIO EDITOR

The professional DAW with MTA support

Multitrack editing, mixing, effects, MTA/WAV/MP3/FLAC import-export on desktop, web and mobile.

Highlights

Multitrack projects

Complete handling of complex audio projects with timeline, waveforms, markers, undo/redo and autosave.

MTA8 / MTA16 support

Native import and export for MTA formats, with slot mapping and dedicated export profiles.

Mixer and effects

Volume, pan, mute/solo, insert FX, presets and render preview for professional mixing.

Desktop, web and mobile

Native apps and online server with authentication, roles, TOTP and project continuity.

Lyrics, chords, metadata

Synchronized extraction, TXT/PDF/ChordPro export and repertoire metadata handling.

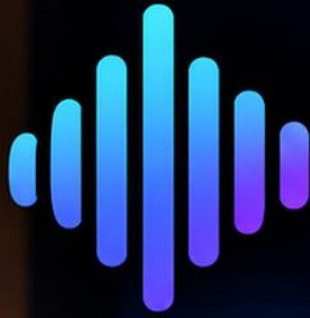

Stem separation

AI stem separation with Demucs, dynamic model catalog and update management on client and server.

Summary table

Editing	Cut, copy, paste, fade, trim, waveform, markers and synchronized timeline.
Formats	Import/export of MTA, WAV, MP3 and FLAC, plus single-track export.
Playback	Live engine, render preview, Follow mode and responsive transport controls.
Platforms	Windows, macOS, Linux, Android, iPhone and iPad.
Security	Local auth, admin approval, email workflows, social login and TOTP.

MTA

AUDIO EDITOR

Operational workflow and technical details

Project modes, MTA8/MTA16 export, synchronization, storage and deployment requirements.

Project modes

Multitrack DAW as the working format; MTA8 and MTA16 as export targets with physical slot mapping.

Storage

Original media, waveforms, renders, attachments and MTA exports live in persistent project storage.

Playback and sync

Immediate start with controlled buffering, drift correction, render preview and automatic refresh when needed.

Effects and processing

Up to 16 insert FX per chain, auto-mix tools, plugin presets and offline/online rendering.

Deployment

Desktop single-user mode, web server and mobile clients connected to a configured backend.

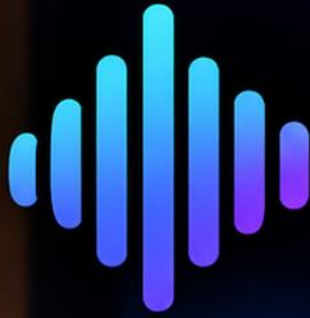

Mobile and native

Native desktop apps bypass the server account requirement; mobile apps support custom servers and managed updates.

Operational limits and notes

MTA8	8 physical output slots; tracks beyond slot 8 must be mapped or merged.
MTA16	16 physical slots; dedicated default corpus for Click and Melody.
Upload limit	1024 MB by default, configurable in Docker/Kubernetes and reverse proxy.
Demucs	High CPU/GPU/RAM usage; execution time depends on the selected model and server hardware.
Security	Role-based UI, email workflows, optional registration approval and TOTP.
Integrations	GitHub releases for native updates, AI model catalog refresh and managed Core ML / ONNX assets.

FEATURES

MTA AUDIO EDITOR

Lyrics, chords, karaoke and AI

High-accuracy extractors, PDF/ChordPro, YouTube, MP4 karaoke, stem separation and model updates.

Lyrics / Chords

High-accuracy extraction, synchronized TXT/PDF/ChordPro export and project metadata enrichment.

Karaoke and MP4

ASS karaoke timeline, optional chord line and MP4 export with embedded synchronized lyrics.

YouTube import

Direct import from URL with paste support, validation and real connection to the audio import flow.

AI models

Managed Demucs registry, mobile Core ML / ONNX delivery, blacklist and on-demand updates.

Advanced workflows

Lyrics engine	Whisper complete-pass extraction prioritizes accuracy and avoids duplicated live chunk text.
Chord placement	PDF generation uses word timing to anchor chords closer to the correct sung syllable/word.
Navigation	TXT and ChordPro downloads use blob download and keep the SPA on the home/workspace view.
Project continuity	Autosave, render cache, waveform cache and synchronized project artifacts are persisted.
Administration	User approval, SMTP workflows, roles, social providers and TOTP remain available.

Supported platforms and workflow

One project, the same data and tools across desktop, web and mobile.

Platforms

Audio / text pipeline

Project workflow

Desktop, browser and mobile share the same project model and synchronized metadata.
